# SoundCard Data Interface Manual

by Yurii Faraday

How to encode text data

Using this software, you may encode some text data to sound and then record it into the tape or transmit with FM, for example.

- Open the SDI app.
- Go to "Encoder" menu.

- Now you can put some text into text box

- For change text size (only for more comfortable looking) set cursor at text box and push control then use mouse wheel

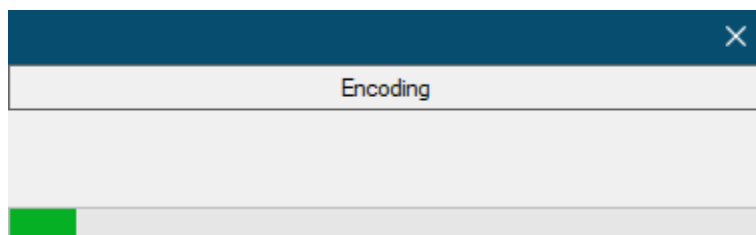

- You may change encoding density, if you want (please, see "encoded signal basics and adjustments" article)

- Then push "encode" button

- Process of encoding will show like that

- About language support: this app uses special-developed text encoding and it causes to make special language alphabet-libs into source code. See current supported text language below:

Russian
English
